New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, useful for monitoring intracellular protein movement, translocation, trafficking

Example 1; Fig 1; 89pp; English.

The invention relates to a fluorescent timer protein having an emission expectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer proteins are useful in comitoring the activity of a promoter, determining the age of a protein, comitoring the activity of a promoter, determining the age of a protein, comitoring an agent that modulates the activity of a promoter and in conversion during development of cells comprising a fluorescent timer protein. Compression during development of a multicellular organism or during compression during comprising a fluorescent timer protein. Compression during development of a multicellular organism or during compression during compression to a drug or other inducer of compression trafficking, or protein sate also useful for assessing gene cativity, monitoring intracellular protein movement or translocation, compress of the activity of a regulatory element, for determining cell caspects of the activity of a regulatory element, for determining cell compression trafficking, or protein stability, to investigate temporal compression of newly synthesised proteins and accumulated proteins, and combrane junctions and extracellular matrix components. The fluorescent combrane junctions and extracellular matrix components. The fluorescent components in prokaryotic and eukaryotic cells, in protease cleavage as biosensors in prokaryotic, non-human plants or animals or site specific gene codifications in cell lines. The present sequence is a DNA encoding components of humanised wild-type Anthozoa protein dripps used for generating fluorescent proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Discosoma red fluorescent protein; DsRed; AB interface; AC interface; fluorescent protein variant; transcription induction detection; fluorescence energy resonance transfer; FRET; protein kinase; protein phosphatase; ion indicator; ds.
The invention describes a polynucleotide sequence (I) encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerise, comprising amino acid substitutions at the AB and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 amino acids, given in the specification, where the substitutions result in reduced propensity of the DsRed variant to form tetramers. (I) is useful for detecting transcriptional activity by providing a host cells constlning a vector which comprises (I) operatively linked to an expression control sequence, and an unit to assay the variant fluorescent protein fluorescence, and assaying fluorescence of the variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     D18COSOME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Discosoma wild-type red fluorescent protein DNA #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADC24127;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26-FEB-2001; 2001US-00794308.

9999999999999999999988 CC fluorescent protein produced by (VII), where variant fluorescent protein CC fluorescence is indicative of transcriptional activity. A polynucleotide CC encoding a fusion protein is useful for the analysis of in vivo CC localisation or trafficking of a polypeptide of interest. A polypeptide CC marker is useful as markers to identify the location and amount of a CC target protein produced, where the target protein is fused to the marker, CC as a complement to or alternative for the green fluorescent protein or CC its spectral variant, for detecting induction of transcriptions, in CC which detects events as the function of the movement of fluorescent General detects events as the function of the movement of fluorescent CC fluorescent sensors for protein kinase and phosphatase activities or CC indicators for lons and molecules such as Ca2+, Zn2+, for identifying the presence of a molecule in a sample, for identifying a specific interaction of a first and second molecule, for determining whether a CC useful for identifying a region or condition that regulates the activity of an expression control sequence. This sequence encodes Discosoma wild-type red fluorescent protein.

                                                                                                                                                                                                                                                                                                                                                                                 Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (BGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DBRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DBRed sequence, where the substitutions result in reduced propensity of the DBRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DBRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, useful molecular biology, e.g. in immunoassays or in tracking protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 678 BP;

CC fluorescent protein or its mutant. The protein is useful in applications consequence in protein or its mutant. The protein is useful in applications consequence in the protein is useful in applications consequence in the protein is expressed, and isolating the cell, whereby the protein is expressed, and isolating the compositions involving chrome or fluorescent protein and is useful in complications involving chrome or fluorescent protein and is useful in complications involving chrome or fluorescent protein and is useful in compositions, hybridization probes, etc. The expression cassettes are composition of matter e.g. food compositions, are useful compositions, planta conditions, conditions, planta conditions, conditions, planta conditions, conditions, planta conditions, conditions, proteins find use in a variety of different applications, as biosensors in prokaryotic and eukaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescent conditions, as second messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acid encoding a rapidly maturing chromo- or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant, useful for applications involving chromo- or fluorescent proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO2003054158-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Discosoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cnidarian; fluorescence resonance energy transfer; FRET; wild-type DsRED;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wild-type DsRED encoding sequence

The binding ligand is useful for detecting the target molecule and is efficiently detects the target molecule. The present sequence is Discosoma sp. red fluorescent protein (RED) DNA used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel binding ligand with intrinsic fluorescence and comprising fluorescent protein having heterologous binding sites, useful for detecting target molecule.

The method is useful in developing a sensor cell for determining the activity of a target gene in the cell. The sensor cell and the methods are useful in developing new and therapeutic drugs directed to the targets. The present sequence is a coding sequence shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 678 BP; 205 A; 129 C; 178 G; 166 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                         The present sequence is humanised drFP583 cDNA drFP583 is a full-length CC cDNA encoding a novel fluorescent protein (nFP) from Discosoma sp. "red", CC a non-bioluminescent species of the Class Anthozoa. The wild-type drFP583 CCC nucleotide sequence was altered to optimise the codons for expression of CC the fluorescent protein in mammalian cells. Fluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein, cell cor organism of interest. Unlike other markers used in protein labeling, cell crequire an exogenous cofactor or substrate. Methods involving fluorescent crequire an exogenous cofactor or substrate. Methods involving fluorescent correctins are also less laborious and less difficult to control than the craditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorephore derivative. CC is purified and then covalently conjugated to a fluorephore derivative can be used as markers for gene expression and protein localization constitutes, and in fluorescence resonance energy transfer (FRET) reactions. They may have improved properties and better suitability for larger constitutions compared to prior art fluorescent proteins such as green
                                                                                                                                                                                                                                                                                                                  Sequence 695 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a modified yeast strain that contains, integrated stably and functionally in its genome, a genotoxicity cassette and a cytotoxicity cassette, each comprising a promoter and reporter gene, both of which are different in the two cassettes. The modified yeast strain is used to detect environmental pollution, especially genotoxic and/or cytotoxic substances in complex environmental contaminants, especially organic compounds, but also (non-)ionising radiation and chemical carcinogens. Particular applications are in monitoring (waste) water (e.g. as an early warning system), medical toxicology screening and for industrial process control. The present seguence is a marker gene suitable for use in the cassettes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 20-21; 34pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                  This invention relates to a novel non-oligomerizing fluorescent protein. CC Specifically, it refers to the presence of at least one mutation in the CC fluorescent protein that reduces or eliminates the ability of the protein CC to oligomerize. The present invention describes fluorescent proteins CC derived from naturally occurring green or red fluorescent proteins and CC provides a fusion protein that comprises a non-oligomerizing fluorescent CC protein linked to at least one protein of interest. As such, these fusion CC proteins can be used in methods and compositions to determine the pH of a CC sample, or whether the sample contains an enzyme, molecule or agent that CC they may be used to identify a specific interaction of molecules, such CC that they are useful for improving or developing new assays in the field CC of molecular biology. This polynucleotide is the DNA sequence that invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to chimeric phosphorylation indicators comprising a phosphorylation polypeptide and a fluorescent protein or in operative linkage, a donor molecule, a phosphorylatable domain, a phosphoaminoacid binding domain (PAABD) and an acceptor molecule. The phosphorylation indicators of the invention are useful for detecting kinases or phosphatases in a biological sample. They are also useful in high throughput analysis e.g. for detecting a kinase inhibitor or phosphatase inhibitor. The present sequence is Discosoma species red fluorescent protein (RFP) encoding DNA used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel chimeric phosphorylation indicators, useful for detecting kinase/phosphatase in samples, has donor molecule, phosphorylatable domain, phosphoaminoacid binding domain, and acceptor molecule, in operative linkage.

                                                                                     The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) cDNA
                                                                                                                                                                                                                                                                                                                                                          Pluorescent proteins containing a mutation that reduces or eliminates is ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11-SEP-2003

                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a chimeric phosphorylation indicator (CPI) (I) comprising in operative linkage, a first fluorescent protein, a phosphoaminoacid binding domain with an FHAZ sequence defined in the specification, a protein kinase C (PKC)-phosphorylatable domain, and a second fluorescent protein. The first and second fluorescent proteins are chosen from green fluorescent proteins (GFPs) and red fluorescent proteins are detectable resonance energy transfer, when the first fluorescent protein is excited. The FKC-phosphorylatable domain and phosphoaminoacid binding domain do not substantially emit light to excite the second fluorescent protein is sexited. (I) is useful for detecting a protein kinase C (PKC) or phosphates in a sample (such as biological sample e.g. cell, tissue sample, or their extracts). (I) is useful for detecting a kinase inhibitor or phosphatase inhibitor. The method of the invention is adapted to high throughput analysis. The current sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-JAN-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for simultaneously quantifying in situ the relationship between a fluorescently-tagged enzyme (E) and it substrate in a population of cells. A population of cells expressing (E) is created in which different cells contain different amounts of (E). The cells are incubated with a substrate, and the concentration and cenzymatic activity of (E) in each cell are simultaneously quantified by optical means. The fluorescently-tagged enzyme is produced by linking the cenzyme with Aequorea victoria green fluorescent protein (GFP), or its carried green fluorescent protein (GFP), or its carried green fluorescent protein (GFP), and cenzyme and its substrate in a cell. The method of the invention is carryme and its substrate in a cell. The method is useful for the study of enzyme and its substrate in a cell. The method is useful for the study of the interactions of cellular level, and especially for examining the interactions of cellular enzymes with chemotherapeutic drugs, e.g. for elucidating mechanisms of multidrug resistance (MDR). The present ground containing the coding sequence for RFP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3311 BP; 858 A; 778 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8

The invention describes a polynucleotide sequence (I) encoding a CC Discosoma red fluorescent protein (DsRed) variant having a reduced CC propensity to oligomerise, comprising amino acid substitutions at the AB CC and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 cm and no acids, given in the specification, where the substitutions result CC in reduced propensity of the DsRed variant to form tetramers. (I) is CC useful for detecting transcriptional activity by providing a host cells conatining a vector which comprises (I) operatively linked to an CC expression control sequence, and an unit to assay the variant fluorescent grotein fluorescence, and assaying fluorescence of the variant fluorescent fluorescent protein produced by (VII), where variant fluorescent protein fluorescence is indicative of transcriptional activity. A polynucleotide concading a fusion protein is useful for the analysis of in vivo CC marker is useful as markers to identify the location and amount of a cc as a complement to or alternative for the green fluorescent protein or trafficking of a polypeptide of interest. A polypeptide cas a complement to or alternative for the green fluorescent protein or the spectral variant, for detecting induction of transcriptions, in CC which detects events as the function of the movement of fluorescent condicators for ions and molecules such as Ca2+, Zn2+, for identifying the presence of a molecule in a sample, for identifying a specific condicators for ions and molecules such as Ca2+, Zn2+, for identifying the gressence on fairst and second molecule, for determining whether a condicators for ions and molecules such as Ca2+, Zn2+, for identifying the gressence on fairst and second molecule, for determining whether a condicators for ions and molecules such as Ca2+, Zn2+, for identifying the gressence on fairst and second molecule, for determining whether a condicators for molecule and for determining whether a condicators for molecule and for determining the pluorescent condicators for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Discosoma red fluorescent protein; DsRed; AB interface; AC interface; fluorescent protein variant; transcription induction detection; fluorescence energy resonance transfer; FRET; protein kinase; protein phosphatase; ion indicator; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Discosoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Discosoma wild-type red fluorescent protein DNA

New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, usefin molecular biology, e.g. in immunoassays or in tracking protein movement in cells. useful

Disclosure; SEQ ID NO 3; 166pp; English

The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed coding sequence with codons optimised for human expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
     The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DeRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DeRed sequence, where the substitutions result in reduced propensity of the DeRed variant to form tetramers and where the variant displays detectable
                                                                                                                                                                                                                                            New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, useful in molecular biology, e.g. in immunoassays or in tracking protein movement in cells.
                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-845265/78.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed coding sequence with codons optimised for human expression.

                                                                                                                                                  The present invention describes an isolated Discosoma red fluorescent CC protein (1) comprising a 241 residue amino acid sequence (see ABP56678, CC S1), with one or more point mutations at amino acid position N24, F125, CC K164, or M183. Also described: (1) a fusion protein comprising (1); (2) CC an isolated nucleic acid encoding (1); (3) a vector comprising the CC nucleic acid of (2); (4) a host cell comprising the vector; (5) a CC retroviral cDNA expression library comprising the nucleic acid of (2), or CC encoding (1); and (6) methods of making a fluorescent variant. The CC piscosoma red fluorescent proteins are useful for functional screens as a CC reporter for gene transcription (e.g. as a fusion protein), for target CC characterisation and localisation of fusion proteins, or for scaffolds CC characterisation and localisation of fusion proteins, or for scaffolds CC used as selectable markers or reporter molecules for a variety of CC used as selectable markers or reporter molecules for a variety of CC used as selection mechanism. The method of directed protein evolution CC useful for obtaining improved variants of red fluorescent protein. The CC variants of Discosoma red fluorescent protein have greatly improved CC variants, expression, and/or folding kinetics as compared to wild type or a codon optimised variant. The present sequence encodes a mammalian CC compared to protein reporter reporter in which is used in an angular form the present sequence encodes a mammalian compared to manufacian red fluorescent protein, which is used in an angular form the present sequence encodes a mammalian compared to wild type or a codon optimised variant. The present protein, which is used in an account of the present sequence encodes a mammalian compared to wild type or a codon optimised variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Discosoma red fluorescent protein, useful for functional screens as reporter for gene transcription, for target characterization and localization of fusion proteins, or for scaffolds for protein and peptic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-MAY-2001; 2001US-0291871P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-MAY-2002; 2002WO-US015968.

The chimeric protein is constructed, so that: (a) the chimeric protein is constructed, so that: (a) the content of the proteolytic site of all the signal proteins are inactivated by linking content to the Nor C terminus of the signal proteins, and so the chimeric content in protein is activated when the proteolytic cleaved by the protesse, and as a result at least one fragment protein that conganal protein is activated signal protein is a transported to a subcellular conganally and (c) the chimeric protein is a transported to a subcellular corganells; and (c) the chimeric protein is a transported to a subcellular corganells; and sequence encoding the chimeric protein is altered depending on the cleavage of the protease. Also described: (1) a recombinant gene comprising a constructed to express the chimeric protein in a cell; (2) a cell transformed with congrues the chimeric protein in a cell; (2) a cell transformed with congrues the chimeric protein in a cell; (3) analysing the activity of a protease inside a cell; (6) a nucleic acid comprising the chimeric protein or the sequence encoding the chimeric protein acid; (8) a vector; (1) analysing the activity of a protease conditions the chimeric protein or the vector; (2) detecting a protease inside a cell; (6) a nucleic acid; (8) a kit for detecting a protease inside a cell or tissue; and (10) detecting a constrain vivo; (4) acid the cell or tissue; and (10) detecting a constrain or vector; (1) and the protein is useful for detecting a constant incention. The chimeric protein is useful for detecting a constant incention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The present invention describes a chimeric protein comprising at least one signal protein that has a trafficking signal targeting to a subcellular organelle and at least one proteolytic leavage site for a protease. The chimeric protein is constructed, so that: (a) the trafficking signals of all the signal proteins are inactivated by linking the proteolytic site or a signal masking protein through the proteolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Arabidopsis thaliana.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC site to the N-or C- terminus of the signal proteins, and so the chimeric CC protein is present in cytosol; (b) the trafficking signal of at least one CC signal protein is activated when the proteolytic cleavage site is cleaved CC by the protease, and as a result at least one fragment protein that includes the activated signal protein is a transported to a subcellular CC organelle; and (c) the chimeric protein is labelled with at least one fluorescent protein and the position and intensity distribution of the Cluorescent protein and the position and intensity distribution of the C the protease. Also described: (1) a recombinant gene comprising a CC by the protease. Also described: (1) a recombinant gene comprising a CC to express the chimeric protein in a cell; (2) a cell transformed with the recombinant gene or vector; (3) analysing the activity of a protease CC in vivo; (4) screening protease inhibitors in vivo; (5) a system for CC detecting a protease inside a cell; (6) a nucleic acid comprising the cs. (7) a vector comprising the nucleic acid; (8) a kit for detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue. The present sequence concodes a fusion protein, which is used in the exemplification of the creaced a fusion protein, which is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Percent Similarity:

(I) comprises, in the CC posterior silverpression a regulatory region (RR) comprising signals for CC regulating expression of a polynucleotide of interest (III) in the CC specified cells and, under control of RR, a region that encodes a CC modified signal peptide (mSP). (I) is at least 90% identical with the CC 1150-2026 nucleotide (nt) region of ADS75466, in which the codon CC containing nt 1486-1488 encodes Ala, Ile or Leu. (I) is optionally CC containing nt 1486-1488 encodes Ala, Ile or Leu. (I) is optionally CC containing of the SGF1 forkhead type, functioning as activator of factors of the SGF1 forkhead type, functioning as activator of transcription and regulator of tissue-specific expression. (III) encodes a polypeptide, specifically spidroin (of spiders) or fibroin (from organisms of the genus Galleria). (I), also related expression cassettes and vectors, are used to prepare transgenic Bombyx that secrete (II) concorporated into silk threads, e.g. where (II) is of biomedical interest the threads are intended for use as textiles and (II) modifies resistance to ductility or elasticity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ

(I) comprises, in the cc for side of the comprises, in the cc for side of interest (II) comprises, in the cc for cregulating expression of a polynucleotide of interest (III) in the cc specified cells and, under control of RR, a region that encodes a cc modified signal peptide (mSP). (I) is at least 90% identical with the cc containing nt 1486-1488 encodes Ala, IIe or Leu. (I) is optionally cc modified by insertion of 1-4 copies of the sequence ADS75467 (nucleotides CC 1379-1390 of ADS75466), which is the binding site for transcription (factors of the SGP1 forkhead type, functioning as activator of cranscription and regulator of tissue-specific expression. (III) encodes a polypeptide, specifically spidroin (of spiders) or fibroin (cassettes and vectors, are used to prepare transgenic Bombyx that secrete (II) corporated into silk threads, e.g. where (II) is of biomedical interest (e.g. hormones, antigens, enzymes, growth factors and receptors) or where to the threads are intended for use as textiles and (II) modifies resistance to ductility or elasticity. The present sequence is a modified version of CC ADS75466 which comprises three copies of the SGP1 forkhead type crassing site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-10-006-922A-12 (1-225) x ADS75468 (1-2772)

The modified yeast strain is used to detect environmental pollution, especially genotoxic and/or cytotoxic substances in complex environmental contaminants, especially organic compounds, but also (non-)ionising radiation and chemical carcinogens. Particular applications are in monitoring (waste) water (e.g. as an early warning system), medical toxicology screening and for industrial process control. The present sequence is a vector suitable for use in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modified yeast strain, useful for detecting toxic compounds in environment, contains integrated cassettes responsive to genotoxic cytotoxic compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4692 BP; 1111 A; 1268 C; 1247 G; 1066 T; 0 U;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yeast; RAD54; promoter; genotoxicity cassette; cytotoxicity cassette; modified yeast strain; environmental pollution; vector; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified yeast strain related vector pDsRedd1-N1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAL47954;

cone or several att sites, where an att site is heterologous to the CC chromosome, and permits site-directed integration in the presence of CC lambda-integrase. Also described: (1) a platform artificial chromosome CC introducing a heterologous mucleic acid into a platform artificial chromosome CC introducing a heterologous mucleic acid into a platform artificial CC chromosome. (1) can be used in gene therapy. (M1) is useful for CC introducing a heterologous mucleic acid molecule into a platform cC artificial chromosome, preferably an Aces. (II) is useful for CC artificial chromosome, preferably an Aces. (II) is useful for producing a troducing (II) by cell fusion, lipid-mediated transfection CC mammal) by introducing (II) by cell fusion, lipid-mediated transfection by a carrier system, microinjection, microcell fusion, electroporation, comicroprojectile bombardment or direct DNA transfer into an embryonic cell, preferably a stem cell or an embryo. (II) comprises a heterologous concleic acid that encodes a therapeutic product which is useful for caking a library of Aces comprising random portions of a genome. ACC44612 can ACC44732 and ABP96650 to ABP96657 represent sequences used in the exemplification of the present invention
Novel eukaryotic chromosome comprising one or many att sites which permits site-directed integration in the presence of lambda-integrase, useful for site-specific recombination-directed integration of DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Page 182-184; 272pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઈ
The invention relates to a construct which allows animals to be bred in captivity but renders them infertile in the wild by allowing reversible control over fertility and reproduction. The construct comprises a native promoter, a blocking DNA sequence contoured for and designed to abrogate a crucial gene's function or to cause its mis-expression, and a genetic switch to regulate controlled expression/repression of the blocker/gene knockout. The construct is useful for preventing embryogenesis or gametogenesis in animals by stably transforming an animal cell with the construct by microinjection, transfection or infection, where the construct stably integrates into the genome by homologous recombination, and implanting the cell into a host organism, where a whole animal develops from the implanted cell. The present sequence is plasmid pSFM 6 containing mouse goosecoid promoter expressing goosecoid cDNA fused to red fluorescent protein. The plasmid contains CMV promoter and SV40 polyA
                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel construct for preventing embryogenesis in animals comprises promoter, blocking DNA which abrogates function of crucial gene ar genetic switch to regulate expression/repression of blocker/gene
